

Ryan Carter

Aspiring Cybersecurity Analyst focused on Risk, Compliance, and Security Governance

Canonsburg, PA | 724-263-5220 | ryancarter7200@gmail.com

SUMMARY

Recent Cybersecurity graduate with a focus on risk, compliance, and security governance, looking for an entry-level opportunity to build real-world experience in IT security, risk management, or security operations. I am interested in helping organizations identify security issues, improve processes, and apply practical solutions that support both security and business needs.

EDUCATION

Slippery Rock University

**Bachelor of Science in Cybersecurity | Minor in Computing |
Concentration in Security Governance**

Graduation Date: May 2026

RELEVANT COURSES:

Intro to Computing – programming logic, variables, loops, conditionals, problem-solving

Programming Principles – classes, functions, debugging, structured coding

Shell Command & Scripting – Linux commands, automation scripts, file system navigation

Advanced Programming Principles – problem-solving, debugging complex code, program structure

Cybersecurity in the Era of Evolving Tech – threat awareness, basic security concepts, risk identification

Secure Programming – secure coding practices, input validation, vulnerability awareness

Fundamentals Database Systems – SQL basics, data organization, database structure

Administration and Security – user permissions, system security concepts

Intro to Computer Forensics – evidence handling, disk analysis, forensic tools (CAINE)

Computer Networks – network structure, communication protocols, security risks

Project Management – project planning, coordination, timelines, team collaboration

Information Systems Security – risk identification, vulnerability assessment (Security Pro), mitigation strategies, business impact analysis

TECHNICAL SKILLS

Programming Languages: Python, Shell Scripting, C++

Tools: Integrated Development Environments (IDEs), Git, Network Traffic Analysis (Wireshark), File Recovery & Disk Analysis (PhotoRec, TestDisk), Linux OS

Cybersecurity: Risk assessment & mitigation, security policy analysis, compliance frameworks (NIST, SOC 2)

Computing: Advanced programming techniques, addressing technical challenges in computing, analytical problem-solving

Digital Forensics: CAINE Linux, Evidence handling

PROJECTS

Slippery Rock University, Slippery Rock, PA

Digital Forensics Investigation Project

Spring 2026

CPSC 333 Computer Forensics

- Utilized CAINE Linux to perform digital forensic analysis
- Conducted file recovery and disk analysis using tools such as PhotoRec and TestDisk
- Practiced proper evidence handling and documentation procedures
- Analyzed system artifacts to identify potential security incidents
- Collaborated with a team to produce structured forensic reports

Research on Satellite Communications and Security Risks

Fall 2025

CPSC 423 Computer Networks

- Analyzed satellite communication security risks including encryption, ground station vulnerabilities, and DDoS threats
- Evaluated over-the-air (OTA) update risks and mitigation strategies, to understand monitoring and patching strategies for satellite systems
- Collaborated with a team to produce a structured research report

Research on Biometrics and Cyber Protection Risks

Fall 2023

CYBER 101 Cybersecurity in the Era of Evolving Tech

- Conducted in-depth research on biometric systems and the associated cybersecurity risks
- Analyzed various types of biometric data, including fingerprints, facial recognition, and iris scans
- Evaluated the potential vulnerabilities and threats to biometric data in different cybersecurity scenarios
- Proposed methods and strategies to mitigate the risks and enhance the security of biometric systems
- Collaborated with a team to develop and deliver a presentation analyzing biometric security risks and mitigation strategies

Security Pro Risk Management Simulation

Spring 2025

MIS 401 Information Systems and Security

- Utilized Security Pro simulation software to identify and assess organizational security risks
- Analyzed vulnerabilities and implemented risk mitigation strategies in simulated business scenarios
- Applied security policy concepts and decision-making to improve overall system security posture
- Evaluated the impact of security decisions on business operations
